Education

Vellore Institute of Technology Aug. 2021 – Present
Masters of Technology in Computer Science and Engineering *CGPA : 8.14/10.00*

NARAYANA JUNIOR COLLEGE 2021
PERCENTAGE:90.7%

EXPERIENCE

Virtusa Aug 2025 – Jun 2026
Software Engineering Intern

- Developed a full-stack property management system using Java, Angular.js, and REST APIs.
- Built responsive frontend modules and backend services for authentication, payments, and user management.
- Integrated REST APIs for transaction processing, tracking, and secure data flow.
- Worked in Agile environment focusing on debugging, testing, and feature enhancements.
- Gained hands-on experience in scalable full-stack application development and software engineering practices.

PROJECTS

AI-Powered Course Generation Platform (SaaS) APRIL 2026
Skills: Next.js, Firebase, Google AI Studio (Gemini API), Razorpay, GenAI, Full-Stack Development

- Developed a full-stack AI-powered web application (basicstutor.com) that generates structured courses using Large Language Models based on first-principles learning.
- Integrated Google Gemini API via Google AI Studio to dynamically generate course content, flashcards, and quizzes for personalized learning experiences.
- Implemented a freemium SaaS model with Razorpay payment integration, restricting users to 3 free courses and unlocking features based on subscription plans.
- Built an admin dashboard to manage users, monitor activity, and control access levels, enabling scalable user management.
- Used Firebase for backend services including authentication, database, and real-time data handling.
- Optimized performance using Next.js for dynamic rendering and seamless user experience.

End-to-End MLOps for Diabetes Prediction JUNE 2025
Skills: MLOps, Python, FastAPI, Docker, Kubernetes, Scikit-Learn, Pandas

- Managed the complete MLOps lifecycle from data ingestion (Pandas) and model training (Scikit-Learn) to containerization and deployment.
- Developed a REST API using FastAPI to serve the trained Random Forest model for real-time predictions.
- Authored a Dockerfile to build a portable image containing the Python application, dependencies, and the serialized model.
- Wrote Kubernetes manifests (Deployment, Service) and deployed the application to a kind cluster.

Generative AI Application using AWS Bedrock and Transcribe MARCH 2025
Skills: AWS Bedrock, AWS Transcribe, Python, boto3, LLMs, S3

- Built an end-to-end generative AI application to transcribe audio and summarize insights using LLMs.
- Integrated AWS Transcribe for speech-to-text and used S3 for storage.
- Used AWS Bedrock to analyze conversations and generate summaries.
- Implemented event-driven automation triggered by S3 uploads.

CERTIFICATIONS

AWS Cloud Practitioner *July 2024*

Ultimate DevOps Project Implementation – Udemy *April 2025*

- Hands-on experience with CI/CD, Docker, Jenkins, Kubernetes, and AWS deployments.

Technical Skills

Languages: Java, Python, C/C++, SQL, JavaScript, HTML/CSS, R
Frameworks: React, Node.js, Flask, FastAPI, Next.js
Tools: Git, Docker, Kubernetes, AWS, Firebase, Jenkins, Terraform, VS Code
Libraries: Pandas, NumPy, Matplotlib, Scikit-Learn
