Summary

Final-year Integrated student at VIT Vellore with hands-on internship experience building backend services and APIs using Spring Boot and MongoDB at Virtusa Consulting Services. Eager to learn, take on new challenges, and grow as a software engineer in a collaborative team environment.

Education

Vellore Institute of Technology, Vellore, Tamil Nadu **June 2021 – August 2026**
Integrated M.Tech Computer Science and Engineering

Sri Chaitanya Junior College, Pune, Maharashtra **May 2019 – August 2021**
Higher Secondary Education

The Bishops School Camp, Pune, Maharashtra **June 2009 – May 2019**
Indian Certificate of Secondary Education

Experience

Virtusa Consulting Services **August 2025 – June 2026**
Software Engineer Intern *Remote*

- Developed RESTful APIs using Spring Boot for the Payment & Transactions Service of a society financial management platform, enabling payment creation, due validation, and payment history retrieval for families and wards.
- Implemented business logic for payment lifecycle management, handling payment statuses such as Pending, Paid, Failed, and Defaulter while ensuring accurate transaction tracking.
- Automated late payment fine calculation by implementing database-level logic that applied a Rs. 100 penalty for overdue payments, eliminating manual intervention.
- Designed MongoDB/Firebase data models for transaction storage and implemented validations to handle duplicate payments, failed transactions, and retry mechanisms, improving data consistency and reliability.

Projects

DlVery - Logistics Management Platform | *React 18, TypeScript, Spring Boot 3, MongoDB Atlas, Tailwind CSS* **2025**

- Built a full-stack logistics management system with role-based access control for Inventory and Delivery teams targeting Tier 1 & Tier 2 cities in India.
- Developed REST API with 15+ endpoints using Spring Boot 3 and MongoDB Atlas for real-time inventory and delivery tracking.
- Implemented priority-based delivery system with real-time status updates, package tracking and an analytics dashboard with agent performance metrics.

Real-Time Emotion Detection System | *Python, TensorFlow/Keras, OpenCV, CNN* **2025**

- Designed a 4-block CNN with batch normalization and dropout regularization, classifying 7 emotions on the FER2013 dataset (35K facial images).
- Boosted validation accuracy by 15% through a targeted data augmentation strategy (rotation, zoom, shift, brightness) to counter class imbalance and overfitting.
- Deployed a real-time inference pipeline using OpenCV Haar cascades for face detection, enabling webcam-based emotion classification with scoring.

Anime Recommendation System | *Python, Pandas, Scikit-learn, Streamlit* **2024**

- Developed a content-based recommendation system to suggest anime based on plot similarity using TF-IDF vectorization and cosine similarity.
- Built an interactive web interface using Streamlit for user-friendly exploration of recommendations.
- Improved response time by approximately 40% through query optimization and caching techniques, and enhanced UX with dynamic filtering.

Technical Skills

Languages: Python, Java, C, JavaScript, HTML, CSS, SQL
AI/ML: TensorFlow, Keras, OpenCV, Scikit-learn, Machine Learning, CNN, Statistical Analysis
Frameworks & Backend: Spring Boot 3, React 18, REST APIs, Streamlit
Databases: MongoDB Atlas, SQL
Tools: Git, GitHub, Postman, NumPy, Pandas
Core Concepts: Data Structures & Algorithms, OOP, DBMS, Software Development Lifecycle (SDLC)
